Dear Sir.

I beg to acknowledge receipt of your paper which I have read with great interest.

The perusal of it has suggested to me that you may be able to assist me regarding a Sign I am by erecting over my door, & upon which I intended placing the words "Pressing" from the quantity of a Copper Plate printing which we have done. The Printers of the Clyde are a Standing which I beg leave to Enclose you herewith charge of the Pressmark.

I have referred to Mr at the close of the few notices. I regret it necessary to persist in disagreeing with it seems to me that if you would refer the matter to arbitration now in progress between Mr Dixon & Mr Robertson Shipbuilders of Govan, you might make a brief but urgent representation on behalf of the necessity of Mr. The fact appears altogether in favour of the Trustees should be - the Trustees can know otherwise as they have known the effect of their changes on the bed of the Clyde. - Were the Arbitrators Mr I should not see Mr the Engineer papers &c. to Mr or the Dixons. I mean to make a formal representation to the Trust on the subject. But I know the value in their eyes of the fact that it is Mr's opinion already expressed to Mr. — The briefest notice will enable you to draw Mr's letter.

As to the Dixons the Arbitrators they are merely an escape from a large question regarding the whole - including their relation & relation with the Barcentine Mr. Inverkeithing & Hyperbolic. I wish to know the results of the two years before venturing to make public strictures of considerable
